

OPTENET WEBFILTER PC

PROTECTION FOR A WEB 2.0 WORLD

BENEFITS

Does not affect the speed of Browsing

99% effectiveness

Minimal error rate

On-line unblocking service (15 min. response time)

Intelligent and multilingual analysis

Guarantee and experience: Over 75 million users

Support 24x7

25 Filtering Categories

DYNAMIC CLASSIFICATION AND BLOCKING FOR PREVENTING ACCESS TO ILLEGAL OR INAPPROPRIATE WEB PAGES

Optenet WebFilter PC is an easy-to-install programme that helps families to avoid both intentional and accidental access to inappropriate content on the Internet. It enables configuration of Internet access timetables and maximum access time, as well as limiting file downloads, and enables control of protocols (P2P), etc. With this filter, the need to monitor your children's browsing is radically decreased.

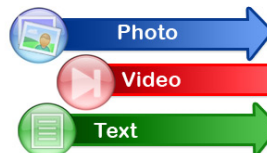

Critical in ensuring accurate blocking in the dynamic world of Web 2.0 is the ability to categorize traffic in real time. Optenet's Global Intelligence Acquisition Network for Threats (Optenet GIANT™) is constantly receiving input from Internet sources around the world, and pushing these updates out to every Optenet solution – ensuring that new threats and malware are properly blocked.

Utilizing Optenet GIANT™ as a key data source, Optenet's Multicontent Inspection and Dynamic Analysis System (Optenet MIDAS™) inspects video, text and images and properly categorizes the data in real time.

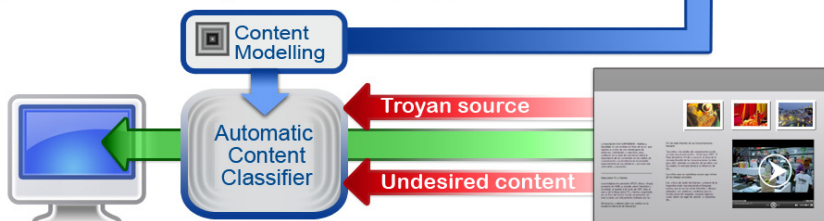

OPTENET'S TECHNOLOGY ADVANTAGE

MIDAS Multicontent Inspection & Dynamic Analysis System

Offline Content Analysis Training

Online Content Analysis

Complete control over content access

Optenet WebFilter PC is an intelligent, incredibly accurate web content filtering solution that identifies, classifies and blocks access to thousands of unsafe and inappropriate websites. Thanks to Optenet MIDAS™, Optenet WebFilter PC dynamically scores and classifies online content with far fewer overblocking errors than any other solution on the market. Families will have easy, unlimited access to the sites they need to access and will be blocked from sites they do not.

Friendly, intuitive and easy to manage

The product is user friendly, intuitive and easy to manage. It enables parents to manage and control their children's Internet access by establishing policies that block unsuitable websites, restrict browsing time, control access to forums, and so on, all with one easy to manage system. It enables browsing schedules to be set, restricts file downloading and controls P2P applications, Instant Messaging, Newsgroup, Chat, email, etc.

Easy to install

Optenet Security Suite PC requires no technical knowledge. It is designed so that you do not have to configure the solution. Just install it and it's ready to go! Nevertheless, there are many features for advanced users, such as personal lists, different user profiles, etc. Additionally, on-screen help is available at any time.

Timetables

Establish time periods in which browsing on the Internet is allowed. Determine the maximum number of hours per day and/or week.

Create different Browsing Profiles

For example, you can create different filtration profiles according to children's ages. If you establish profiles, the User Name and Password will always be requested to identify the profile to be able to browse. You can create as many profiles as you need.

Block Internet access

When the user makes ten attempts to access sites not permitted by the filter during the same session, if this option has been activated, the connection to the Internet will be blocked for that user. Only the Administrator will be able to re-establish the access to the Internet.

Personal Lists

The user can personalise the filter in such a way that there are certain websites on the Internet to which access can be gained, regardless of whether or not it is in the lists. This is what we call Permitted Addresses. You can also do this with websites that you do not want to be seen, regardless of the category to which they belong. A list of Prohibited Addresses will be created.

Browsing History

Makes it possible to view the latest pages that have been browsed by each of the users, indicating whether they have been blocked.

Password

In order to ensure the privacy of setup and administration, the programme requires a Password to deactivate or modify the configuration of the filter.

Contribution

This service makes it possible for the users of the filter to be able to add website addresses that are not included in the database of lists and are therefore not being filtered.

Filtration by file types

In addition to content, Optenet makes it possible to stop the downloading of files from the Internet to the computer. This includes the following types of files: video, music, programmes, images and compressed files.

Optenet software is compatible with the most frequently used operating systems, including:

- Windows Vista
- Windows XP
- Windows 2000

Processor: Pentium or compatible.

RAM Memory: 64MB or more.

ABOUT OPTENET

Optenet is a global IT security company that provides high-performance security solutions to service providers and large enterprises worldwide.

Optenet's technology protects 75 million end users around the globe, including customers of many of the world's leading ISPs and mobile operators, as well as employees of global enterprise organizations.

The Company is a socially conscious organization, committed to eliminating illegal content on the Internet, protecting children and supporting government agencies and non-profit organizations that share the same goal.
